

Omnixx Enterprise®

What is Omnixx Enterprise?

With the introduction of Omnixx Enterprise, Datamaxx sparked a revolution in the Law Enforcement and Public Safety industry, proving that information access and sharing technology didn't have to be prohibitively expensive or hard to use. Today, more than 750,000 users rely on the Omnixx Suite of products to provide robust, cost-effective solutions to access, collect, share, and analyze information. The Omnixx Enterprise Platform transcends products currently on the market by offering agencies one single platform in which they can operate any client - from desktop, web, mobile, and handheld clients to clientless functionality that supports any message-capable device. Omnixx Enterprise provides all of the tools necessary for agencies to prevent, fight, and analyze crime and terrorism.

Quick Facts

- More than 750,000 users deployed worldwide
- Used by 70% of Law Enforcement agencies
- Used by largest metros in the U.S. including New York City Police Department
- More than 10,000 users of Datamaxx Secure Cloud™

Enterprise Proven Solutions

Omnixx, the most widely deployed law enforcement data access solution, is entrusted with fostering mission-critical operations in agencies of all sizes. Providing a distributed architecture that ensures no single point of failure, it features built-in support for fault tolerance, load balancing, and managed services. Building on best-in-class architecture, Omnixx Enterprise provides a seamless upgrade strategy for current Omnixx Standard and Metro Edition customers, delivering a high-availability solution at a fraction of the cost.

Feature Summary

- Single Sign-On, Single Point of Administration
- Rapid Deployment & Advanced Installation
- Scalable n-Tier Architecture
- Central Repository supporting:
 - MS SQL
 - Oracle RDBMS
- Enterprise "Over-the-Air" User and Device Management
- Dynamic Updates - Automatic forms and message updates
- CJIS Security Policy Compliant
- FIPS 140-2 Encryption
- Advanced Authentication
- API, XML and Web Services Support
- Built-in Support Network Authentication including:
 - LDAP
 - Active Directory
 - Omnixx Directory
- Certification/Role-Based User Authorizations
- SNMP Monitoring, Auditing and Reporting Capability
- Supports High Availability, Clustering, and Load Balancing
- Enterprise Messaging & Reporting
- Enterprise Training & Certification
- Omnixx Snap-Ins – Extensibility for quick integration to third-party data sources

Omnixx Enterprise®

Omnixx Enterprise Clients

Omnixx Enterprise provides several types of user interfaces to fit the different needs of the market today. From traditional desktop and web clients, to advanced mobile data computing and handheld interfaces, Omnixx Enterprise truly offers a client for any situation and type of user. Omnixx Enterprise includes:

Omnixx Force Desktop

A feature rich and robust Desktop client designed for the power user such as criminal records, dispatch, and investigations users.

Omnixx Force Web and Web Lite

A web-based solution offering the same functionality as the Desktop client, but delivered as a ZFA (“Zero Footprint Application”). Omnixx Force Web is intended for power and casual data consumers who prefer a browser-based interface. Also offered in a “Lite” version as a query-only tool.

Omnixx Force App

Extends the familiarity and power of Omnixx Force Desktop to handheld devices. The smart client offers features such as seamless data connectivity, FIPS 140-2 enhanced security, and full image support.

Datamaxx Secure Cloud

Omnixx Enterprise is offered in the Datamaxx Secure Cloud, located within the only Nlets-audited private facility that meets FBI CJIS Security Policy requirements such as FIPS 140-2 and Advanced Authentication. The Datamaxx Secure Cloud was specifically designed for the public safety and homeland security industries.

Solution Overview

Omnixx Enterprise provides a solid foundation for deploying highly secure mission critical systems including message brokering, enterprise searching, enterprise reporting, information sharing and access, data collection and workflow, and enterprise training and certification – all from one server platform. Omnixx Enterprise users select the interface that best suits their role and function. Essentially, agencies are able to make a single investment in technology providing access to information and resources they need to increase public safety, improve their internal operations and enhance communications. An agency no longer needs to purchase a separate message switch and clients, a separate information sharing portal, a separate data integration platform, a separate mobile data solution, a separate training and certification solution, etc. – all of this is provided with Omnixx Enterprise. New data access tools, web technologies, and security enhancements save time, reduce costs, and provide a solid foundation for a dynamic and optimized enterprise platform. With Omnixx Enterprise you can deliver and manage rich user experiences and applications, provide a highly secure infrastructure, and increase technological efficiency and value within your agency.
