## The Datamaxx Advantage

For more than 20 years, Datamaxx has been an industry leader in law enforcement, criminal justice and public safety information sharing. Datamaxx built its corporate reputation on designing and developing ways to interface to these systems. In fact, three law enforcement communication standards are Datamaxx-developed, including DMPP-2020, DSEO and OFML, which are now standards in law enforcement communications and message switching. Datamaxx was the first strategic partner of Nlets, and remains the only privately-held company with a direct connection to Nlets. In addition, the Datamaxx Secure Cloud™ is the only Nlets-audited cloud that meets strict FBI CJIS security requirements. These distinctions give Datamaxx customers the assurance their information solutions are managed by leading-edge industry experts with the experience and knowledge necessary in the ever-evolving technology world.

## Successes

*"The Datamaxx global switch and platform utilized by all embassies located throughout the world provides mission-critical services to help us protect our homeland. DOS needed a vendor and a system that was both reliable and sound - and Datamaxx fit the bill. In addition, DOS saves hundreds of thousands of dollars by utilizing the Software as a Service within the Datamaxx Network Operations Center. We value our relationship with Datamaxx and look forward to many years of continued service."*
