

Datamaxx Secure Cloud™

The only Nlets-audited private cloud meeting FBI CJIS security requirements

In today's climate, no longer are public safety agencies immune from budget constraints. Now agencies and departments with conservative budgets can utilize the most powerful law enforcement solutions on the market. Datamaxx Secure Cloud Solutions provide direct access to private law enforcement networks and homeland security information sources via the industry's first and only private secure cloud.

Quick Facts

- Specifically designed with the public safety and homeland security market in mind
- Real-time access to the data you need
- Secure – the only Nlets-audited private cloud meeting FBI CJIS Security Policy requirements
- Flexible and accessible from anywhere
- Easily deployed and updated
- 24x7 support

Datamaxx Solutions in the Cloud

- CJIS solutions, including its flagship suite of solutions, Omnixx Enterprise
- Information sharing and intelligence through the Omnixx Enterprise Intelligence Suite
- Mobile and wireless solutions
- Critical Infrastructure & Secure Access Control solutions

Cloud Computing at a Glance

The cloud solution enables users to run applications through a virtual data center instead of from installed software. But, for law enforcement agencies handling sensitive and critical data, it is imperative to choose a secure data center that understands the unique needs of the public safety industry. The Datamaxx Secure Cloud solution is the only FBI- and Nlets-audited private cloud offering CJIS solutions, and Datamaxx has been a premier solution provider exclusively to the law enforcement, criminal justice, public safety, and homeland security markets for more than 20 years.

Datamaxx Secure Cloud

The ONLY Cloud with the Security You Need

The Datamaxx Secure Cloud is located within the only Nlets-audited private facility that meets FBI CJIS Security Policy requirements such as FIPS 140-2 and Advanced Authentication. The Datamaxx Secure Cloud is based in our state-of-the-art Network Operations Center (NOC). The Datamaxx NOC has been carefully designed to meet stringent FBI CJIS Security Policy requirements by housing sensitive hardware and software in a biometrically access controlled area, powered by redundant uninterruptible power supplies and protected by state-of-the-art fire prevention systems. All Datamaxx personnel must pass FBI CJIS Security requirements and attend and maintain a security awareness training certification. Today the Datamaxx NOC is proud to host deployments for a vast client base that includes local, state, federal and international clients.

Reduced Cost

Using a cloud-based environment removes the need for expensive up-front investments and the typical costs associated with on-premise solutions. Agencies and organizations no longer have to worry about the storage and staffing to keep mission critical applications and communications functioning. In addition, cloud technology is subscription-based taking the load off of capital budgets and in the end, saving money

Highly Automated

Agencies and organizations do not need to be concerned with keeping software up-to-date. Required updates are automated and handled through the secure cloud

Flexible & Mobile

Cloud computing offers much more flexibility than past computing models; it can be easily scaled up or down according to demand. Additionally, the mobility of the environment means that staff can securely access data they need from anywhere at any time, whether it's through a desktop computer, a laptop or a handheld device.

Easily Deployed

Instead of installing a suite of software for each device, agencies only have to load one application. That application allows employees to log into the Web-based secure cloud, which hosts all the programs the user needs to get the job done.

Added Value

Not only are the solutions you need now available through the Datamaxx Secure Cloud, but Datamaxx continually adds valued services to the cloud so agencies and organizations can easily take advantage of new solutions.

Shifts Focus to Your Mission

Since agencies and organizations no longer having to worry about constant server updates and other computing issues, they can be free to concentrate on their primary missions.

24x7 Technical Support

Agencies and organizations do not need extensive IT resources to maintain and update software or assist with user troubleshooting. Datamaxx provides outstanding customer support 24 hours a day, seven days a week, 365 days a year.
